Invented for life

# Natural-gas powertrains

Economical, efficient, and fascinatingly quiet

Powertrain systems and electrified mobility

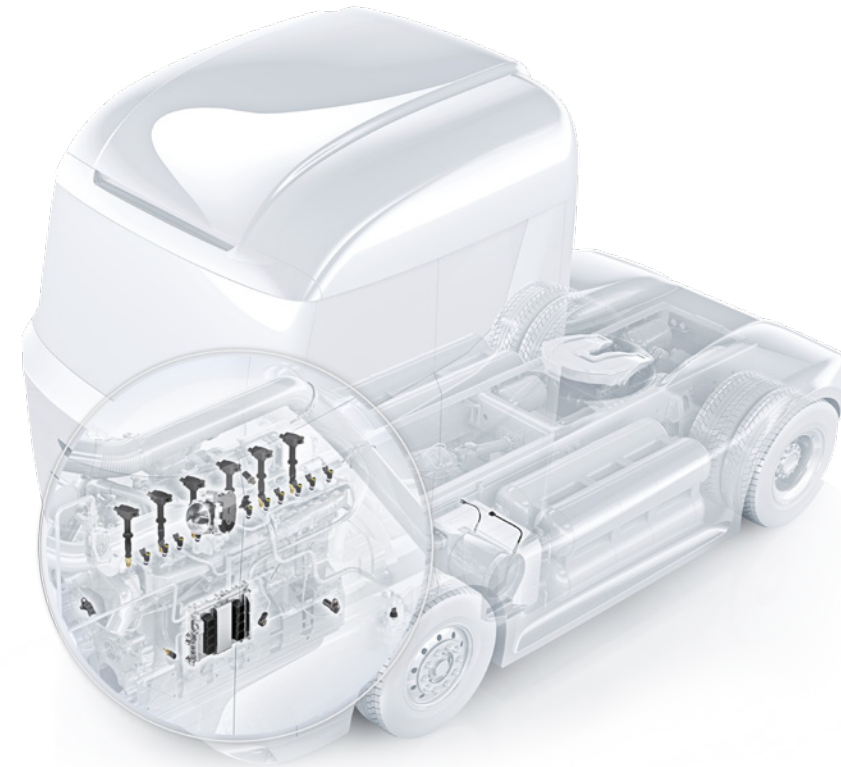

Natural-gas powertrain technology is an established alternative available today

## resource- saving

**up to 10% less CO<sub>2</sub> emissions than  
a diesel powertrain**

## comfortable

**Commercial vehicles with a modern natural-  
gas powertrain are fascinatingly quiet.**

- ▶ Lower CO<sub>2</sub> emissions and particulate matter compared to liquid fuels help to comply with EU VI standards
- ▶ Cost advantages, resulting from favorable natural-gas prices
- ▶ Gaseous fuel does not suffer paraffin separation
- ▶ Comprehensive competence and experience in natural-gas technology due to adaption of existing passenger car components capable 24V applications
- ▶ Extended portfolio of natural-gas components offering full engine management system proven in series
- ▶ Due to its flexibility it's adequate for commercial vehicles from light and medium duty up to heavy duty long haul
