Software and Services

Vehicle health certificate

Objective assessment for greater transparency of the vehicle condition

Software-based assessment

of the vehicle condition by reading stored vehicle data

Higher transparency

regarding the condition of the traction battery in hybrid and electric vehicles

- Neutral software-based evaluation of the vehicle condition by reading out stored data from the vehicle's control units
- Detection of manipulation of the mileage or the odometer
- Minimization of effort in certificate creation through efficient processes and seamless integration into existing customer systems
- Evaluation-relevant information at a glance through a clear presentation of the consolidated vehicle data
- Additional revenue potential and increased customer loyalty through an expanded service offering
- Convenient process with direct certificate issuance in printed or digital form
