Remanufacturing solutions

Outstanding price/performance ratio

High quality and reliability

Fulfills the same standards as original parts

Circular economy

Important contribution to circular economy due to the reuse of products

- Resource-efficient due to reuse of materials and reduction of CO₂ emissions
- Provides supply-chain flexibility with increased independence from raw material market
- First class quality, reliability and performance by using synergies with original design and manufacturing equipment
- REMAN products are according to the same standards and tests as original parts
- Usage of original production components for replacement sub-components
- Technology improvements realized on original parts are incorporated into series remanufacturing
