

Energy

High-pressure pump CP4 for common-rail systems

For very high motor performance with low consumption

Up to 2,700 bar

of pressure allow an efficient and exact fuel injection

Modular design

for a whole range of different applications

- Up to 500,000 start/stop applications possible
- Robust design for selected and standardized country-specific fuel qualities
- Increased hydraulic efficiency with electric suction valve
- Over 60 million CP4 pumps produced guarantee high-volume quality
- Broad area of application from passenger cars, light and medium duty vehicles up to small heavy duty vehicles
